<p>Documents 1 to 3 indicate that peppermint oil and L-menthol suppress peristaltic movement, and are thus useful as anticonvulsant agents. Herein, a comparison of the invention that is set forth in claims 1 to 7 and the inventions that are disclosed in documents 1 to 3 shows that the former invention differs from the latter inventions in that it comprises an antifoaming agent and has an average particle diameter of less than 100 nm.</p>

Box No. V

Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability;
citations and explanations supporting such statement

Meanwhile, document 4 makes disclosures in relation to an aqueous composition that comprises a dimethylpolysiloxane as an antifoaming agent. However, the composition in question is primarily used in cosmetic products, and document 4 does not include any specific disclosures in relation to the average particle diameter thereof; consequently, it cannot be said to have been easy to conceive of the invention set forth in claims 1 to 7 in the light of the disclosures in question, even for a person skilled in the art.

In addition, document 5 discloses preparations which exhibit actions similar to those disclosed in documents 1 to 3; however, the active components thereof are L-menthol derivatives other than L-menthol itself, and thus said active components are different from the active components of the present application.

Therefore, the invention that is set forth in claims 1 to 7 involves an inventive step in relation to the disclosures of documents 1 to 5.
